This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

+ *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
+ *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
+ *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
+ *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

PREFACE

Scope. This book contains an alfabetic list of about nineteen thousand words which present special difficulties or variations of pronunciation or spelling. Many of the words in the list are difficult or variable in both pronunciation and spelling.

The statement is often made that many English words, especially monosyllables, are alredy spelt fonetically and therefore present no difficulties of either spelling or pronunciation; but this statement is really not true, unless the fonetic alfabet in mind be one which in its structure is especially conformd to the existing orthografy of the English language only, and unless those who use it are supposed to be alredy familiar with the English language. From a cosmopolitan point of view there is hardly a word in the language, excepting a few weak or unstrest forms, which is spelt fonetically. Every present-day English dictionary may thus be said to be a dictionary of hard words, and it becomes evident that the book before us, being limited in its scope, and made for the use of the general public, must necessarily be restricted to a comparativly small vocabulary.

Among the words treated are many irregular plorals and other derivativs; but no attempt has been made to make the inclusion of such forms a special feature of the book. Proper nouns have been excluded. I am preparing a separate list of these, with definitions, which I hope to publish before long under the title of Dictionary of Proper Names.

The present volume combines in one vocabulary practically all the words treated in similar lists hitherto publisht in dic-

tionaries and manuals, and contains, besides, many words never before treated in such lists. Especial reliance has been placed upon data containd in the English-French part of my International French-English and English-French Dictionary, in Murray's New English Dictionary on Historical Principles so far as available (*A* to *sauce*), and in Whitney's Century Dictionary (1889-1891).

I have been fortunate in securing certain very valuable suggestions, and also certain specific criticisms, especially in the letter *A*, and in this Preface, from George Hempl, professor of Germanic filology in Stanford University, California, whom I consider one of the most accurate of foneticians.

Spellings. The word-forms or spellings given in title-place are in the main those which are most likely to be lookt for by the general reader. Under each title-word are given in brackets the other current spellings of the word. In some cases mention is also made of spellings no longer in current use. These are confined mainly to obsolescent forms and forms valuable because more nearly fonetic than those in current use.

Cognate forms having the same meaning as the title-word but differing from it in pronunciation, are classified as 'synonymous cognates.' Among the variant spellings no attempt has been made to give all the apostrofized or specially accented forms. A few of the more common ones have, however, been included: as, *'bus, tho', zoölogy, belovèd.* Dialectic spellings are only occasionally given.

When a title-word is of two or more parts of speech, or when two or more title-words are spelt just alike but are of different part of speech, or of different origin, or are for any other reason treated separately, the oldest part of speech, or the oldest title-word, is placed first, the others following somewhat in the order of their first known appearance in the English language.

Definitions. To enable the reader easily to identify the word whose spelling or pronunciation he is seeking, short def-

ɪnɪtɪons have been ɪnserted ɪmmedɪately after most of the title-words. In many cases the defɪnɪtɪons have been reduced to a mere synonym or classɪfɪcatory word. When several defɪnɪtɪons are gɪven, their ɵrder ɪs ɪn the main hɪstɵrɪcal, the oldest sense beɪng placed first, wɪth the more recent senses fɵllowɪng ɪn the sequence of their temporal development. Fortunately thɪs sequence ɪs ɵften closely ɪdentɪcal wɪth the sequence of their lɵgɪcal development.

Pronunciation. The pronunciation ɪs ɪn ɵvery case ɪndɪcated by a foll re-spellɪng. Under each title-word are gɪven, ɪn somewhat nɵrmalized or unɪversalized fɵrm, ɪts most acceptable or prɵper natural pronunciation or pronunciations current to-day ɪn the Englɪsh-speakɪng world at lɵrge.

Where several pronunciations are gɪven wɪthout classɪfɪcation, the fɵrms fɵllowɪng the first fɵrm are usually to be consɪderd as ɪndɪvɪdual or local variants ɪn good usage. Lɪttle heed ɪs taken of the mɵdɪfɪcations whɪch words undergo when used ɪn types of dɪscourse dɪfferent from the nɵrmal type. On the other hand, much attention has been gɪven to functɪonal variants concɵmɪtant wɪth changes of meanɪng or stress, variants whɪch each ɪndɪvɪdual uses accɵrdɪng as he uses a word wɪth thɪs or that meanɪng, ɪn thɪs or that manner or posɪtɪon, or wɪth thɪs or that degree or posɪtɪon of stress.

An ɪmpɵrtant class of variants ɪs that of words such as *abstract* whɪch, when used pɵsterɪorly (that ɪs, after a word or syllable havɪng chɪef stress), are nɵrmally strest on the last syllable, as ɪn the sentence: *the science of logic is* ˌæb'stɹækt, but when used anterɪorly (that ɪs, before a word or syllable havɪng chɪef stress, are nɵrmally strest on the fɪrst syllable, as ɪn the sentence: *logic is an* 'æbˌstɹækt *science.* By no means all variants of thɪs class have been ɪncluded. Those ɵftenest gɪven ɵre adjectɪvs, whose predɪcatɪv fɵrms dɪffer ɪn thɪs way from their assumptɪv (ɵr, as they are ɵften cald, attrɪbutɪv) fɵrms. Cɵmpound words, such as *well-bred,* whɪch are characterɪzed by thɪs same mɵde of variation, are gɪven here and there merely as examples of groups of cases of like kɪnd, many of whɪch are omɪtted.

The cases of words with the prefix *un-* are so very numerous that it has seemd worth while to include a considerable number of the more common or more interesting of them. The purpose of including these and other derivativs and compounds has usually been to call attention to this special variation or to some other special feature. In treating the derivativs, therefore, I have avoided repeating minor variations which are alredy given under the original words elsewhere in the vocabulary.

The recognition and careful treatment of these fenomena I believe to be, as I said in my French-English and English-French Dictionary (Preface, page 5), an important innovation in lexicografy. Speech, as actually utterd, is far richer in such variants than the conventionalities and limitations of the current orthografy would lead most people to believe. This fact I hope to make still clearer in a book which I intend soon to publish; namely, a Fonetic Dictionary of the English Language.

There is certainly abundant opportunity for antagonizing the intolerable practises of the old-school lexicografers in this field. The word-books in common use are weighted down with antiquated fonetic notations, and frild with orthografic, fictitious, and systematically erroneous pronunciations. These books are in large mesure the creatures of a commercialism whose policy is to conserv and perpetuate fonetic error and iniquity. This policy has been adhered to for so long a period, and is still being applied on so vast a scale, that the peculiar species of pseudofonetic word-forms characterizing these books have taken on a sacredness comparable with that of the current spelling itself. The antiquated notation used, the fanciful qualities and quantities assigned the sounds represented, and the avowedly false syllabication and stress depicted are preservd with such an ignorant, obstinate, and sanctimonious spirit, as to appear truly ridiculous to modern foneticians.

No attempt has been made to ring all the changes on normal vowel quality and length, stress, and syllabication

which consistency would require; much less to follow up abnormal forms of speech, such as those found in oratory, dictation, singing, dialect, or child-speech, or in the blunders of foreigners learning English, or to consider in detail the assimilation and elision of sounds in contiguous words.

The pronunciation given of semi-foreign words is their pronunciation in the sound-system of the English language, not their pronunciation in the sound-system of the language whence they were adopted into English. For example, *menu* is given as ˌmeˈnjou, or ˈmeeˌnju, and not as məˈny (as it is pronounced in French). Probably no case is known of a new elementary (foreign) sound being directly adopted into a language. Sounds such as [y], represented by the (u) of the French word *menu,* or as [x], represented by the (ch) of the Scotch word *loch* and the German word *ach,* or as [ø] represented by the (oe) of the German word *Goethe* and by the (eu) of the French word *peu,* which are often said to occur in these words as adopted and used in the English language, do not, in reality, so occur. These sounds do not form a part of the sound-system of the English language. Similarly, but to a less degree, is this true of certain combinations of sounds, as initial [ks], [ts], [ps]. Tho it is perhaps possible for most English-speaking persons, without training, to utter these sequences of sounds initially, and tho these sequences are sometimes actually so used, as in certain rare or bookish words, their adoption is in most cases resisted. Note the rebellion against the use of initial [ts] in *tsar, czar* (zɑːz, tsɑːz) in spite of the fact that [ts] often occurs in English both medial and final.

Among the many classes of words in the pronunciation of which there is a distinct difference in usage, there are some classes of vast extent. Of some of these extensiv classes many examples are given in this dictionary; but of others only an occasional example is given. Of still other of these classes no mention at all is made. Words ending in [tʃəz] or [tçəz], for example, as *nature, culture,* and words like *bass, launch,* etc., are often noted as having two or more distinct

pronunciations. So with words having [iou, jou, çou], etc., or [ou], etc., as *evolution, endure, news, Tuesday.* But in other cases, as of words ending in [ʃən] or [ʃn], like *nation, association,* or in [izəm, æzəm], etc., or [izm, æzm], etc., like *prism, ostracism, spasm,* etc., or having [ək, əg] or [ik, ig], as *character, obstacle, Alexandrine,* little or no prominence is given to the matter.

In classifying the pronunciations of a word as British, Irish, Scotch, American, less proper, improper, vulgar, etc., it is not ment that the reader should interpret these terms in too narrow or exact a manner. As a general rule, American usage is given the preference and is placed first, without being markt. Usage markt as British may be common or normal also in New England or in other parts of the English-speaking world. Usage markt as dialectal, vulgar, or improper may sometimes be heard in the speech of a cultured person. Many secondary forms which are left unclassified or which are classified as 'less proper,' etc., might upon further investigation as to the propriety and extent of their past and present usage prove to be either (1) equally proper, but less frequent, (2) more proper, tho less frequent, (3) both more proper and more frequent, (4) dialectal variants, or (5) functional variants. Of trisyllables like *beautiful, duplicate, equally, proteus, purity,* etc., it may be said to be probable that the second pronunciation given (namely, that with a short vowel insted of a diffthong in the first syllable) represents a more frequent and a better usage than the first pronunciation (which is the only form met with in existing dictionaries).

Among the sounds and shades of sound which in this dictionary are either not markt at all, or but rarely markt, may be mentiond the following:

1. The glottal stop [ʔ] is quite common in English. It often occurs initial before strest vowels, and sometimes occurs final in certain forms of the word *yes.* It is rarely markt in this book.

2. The central stop [g], as in the word *gig* (gig) is a somewhat different sound from the back stop [g], as in *go* (goo).

9. The several varieties of mid-central vowel sounds, as in the words *govern* ('gʌvəɚn), *lengthen* ('lɛŋθən), *tackle* ('tækəl), *Anna* ('ænə), *obey* (ə'beɛ), are not definitly differentiated in English, and perhaps never will be. They are, therefore, all represented with sufficient accuracy for the purposes of this book by the single letter (ə).

10. Half-long vowels. The vowel [ɑ] before [r] followd by a voiceless stop, as [k], and a weak syllable, as in the word *market* ('mɑrkɪt, 'mɑ:r-kɪt), may be said to be normally half-long. Similarly with the vowel [ɒ] before [r] followd by a voiceless stop, or by [n], [l], or [dʒ], and a weak syllable, as in the words *curtain* ('kɒrtn), *learned* ('lɒrnɪd), *early* ('ɒrlɪ), *clergy* ('klɛɒrdʒɪ), respectively. As no symbol is used in this book for half-length, the vowels [ɑ] and [ɒ], when really half-long, are often markt as short only, or as either short or long, two re-spellings being given in the latter case.

11. Weak voiceless consonants have for convenience been clast as voiced or voiceless according as the preceding sound is voiced or voiceless, as in *his* (hɪz, rather than hɪs), *edged* (ɛdʒd, rather than ɛdʃt), but *scratched* (skɜætʃt). Such sounds are susceptible of a more accurate treatment.

Fonetic Notation. The sounds of speech are noted in this dictionary by means of a system of letters which, for convenience, are arranged in the order g, k, etc. This system of letters, so arranged, I have named *gammakap* (from *gamma* and *kappa*), by analogy to the word *alfabet,* which denotes a system of letters arranged in the order a, b (or alfa, beta), etc. The system is essentially identical with the international alfabet assembled about the year 1886 by Paul Passy of Paris (partly from elements containd in the previous fonetic alfabets of Henry Sweet and others), and fosterd since that time by the International Fonetic Association (20 rue de la Madeleine, Bour-la-Reine, Seine, France). In this dictionary and in previous publications I have further amplified and modified this system of fonetic notation, molding it into a still more delicate and useful instrument of precision.

Below are two tables. The first table shows the more important letters of the universal gammakap, arranged so as to give some idea of the place and manner of articulation of the sound or group of sounds which each symbol represents. Be-

sides the symbols (letters) for indicating the basic sound-qualities, which constitute the gammakap proper, this universal system includes, of course, other symbols (modifiers), for indicating voicelessness, nasality, and whisper, and the various degrees of length, stress, and pitch. The second table shows the letters of the English gammakap, with examples of words containing the sounds which the letters represent. In a few cases, examples from foreign languages have been added, to show the occurrence of practically the same sounds in those tongues.

Duration. Extra length, or duration, of elementary sounds, especially ɪn the case of vowel sounds, is indicated by the length-mark (:) placed just after the letter representɪng the sound ɪn question, as ɪn p*a*lm (pɑ:m), l*au*d (lɔ:d), *air* (ɛ:ɜ), zygospo*re* ('zɪgə,spɔ:ɜ), and ɪn the ɪnterjection *sh* (ʃ:).

Syllabication and Stress. The various elementary sounds of speech, when utterd ɪn any series or sequence, wɪthout ɪncrease or dɪmɪnution ɪn the strength of the brethɪmpulse, possess various degrees of (ɪnherent) relatɪv sonerɪty. The voiced sounds are more sonorous than the voiceless sounds; the sonorants are more sonorous than the stridents; the resonants are more sonorous than the sonorants. And just as this is true among the larger classes of sounds, so also is it true among the smaller groups of sounds and among the indɪvɪdual sounds. (See the Unɪversal Gammakap, page 9, above.)

A syllable is a premɪnence of sonorousness or loudness: a wave, as it were, of sonerɪty, risɪng above the general level of speech.

Any elementary speech-sound utterd by ɪtself, ɪn a sɪngle breth-ɪmpulse of unɪform or only gradually changɪng strength, constɪtutes a sɪngle syllable. A group consɪstɪng of two or

more elementary sounds utterd in sequence constitutes either one syllable, or more than one syllable, accerding as it contains one wave of sonority, or more than one wave of sonority, rising above the general level of sonority.

If a syllable or sonoric wave contains more than one sound, its crest or point of maximum sonority lies, of course, within its most sonorous sound. For example, in the monosyllable *bet* (bɛt), which contains the three sounds [b], [ɛ], and [t], the syllabic crest lies within the sound [ɛ], the most sonorous sound in the syllable. If one syllable or sonoric wave follows another, in the same breth-impulse, the intersyllabic trough, or point of minimum sonority, lies within the least sonorous sound between the two wave-crests. For example, in the disyllable *better* ('bɛtəɹ) the two syllables are utterd in a single breth-impulse, and the trough lies within the sound [t], the least sonorous sound between the two crests [ɛ] and [ə].

A sound forms the crest of a sonoric wave (that is, is syllabic) if separated from adjacent sonorous sounds by sounds less sonorous than it or the adjacent sonorous sounds. Not resonants only, but also consonants (stridents and sonorants) may be syllabic. In English we have an example of a syllabic strident in the [t] of *practically,* as sometimes pronounced; of syllabic sonorants in the [l̩] of *kettle* ('kɛtl̩), the [n] of *sudden* ('sʌdn), the [ʃ:] of *psht* (pʃ:t). The sonoric undulations due to the presence of the [s] in *star* (stɑ:ɹ) or *cats* (kæts), the [ʃ] in *catch* (kætʃ), or the [θ] in *wealth* (when pronounced wɛlθ), and the like, are comparable to mere ripples, rather than waves of sonority, and to most ears are not perceptible as syllables. (Compare paragraf 4, page 7.)

Syllables are the result of the independent or conjoint action of two factors: (1) the above-mentiond relativ inherent sonorities of the elementary sounds, and (2) the changes wrought among the relationships of these inherent sonorities by sudden changes in the force of breth-impulse or stress. If a new breth-impulse is introduced into any utterance, a new sonoric wave or syllable begins just where this new breth-impulse begins.

A syllable may be cald *static* when at its inception the force of the breth-impulse remains the same as it was just before, or changes only at the same rate at which it was before changing. Static syllables exist solely (or primarily) in virtue of the relativ inherent sonerities of the elementary sounds.

A syllable may be cald *dynamic* when at its inception the force of the breth-impulse is suddenly increast. The first or initial syllable of any utterance is of course a dyanmic syllable.

Between a dynamic syllable and a static syllable, as in the word *better* ('betəɜ), mentiond above, or between two contiguous static syllables, as in the word *logically* ('ɫedʒikə-ɫi), there is no point of division lying between two sounds of different quality. In so far as there exists any definit point of syllabic division in such cases, it must always be located within the limits of a sound of minimum sonerity. In the word *better,* this sound is the [t]; in *logically,* the [d] or the [k]. These sounds belong to neither syllable more than to the other, but each one of them constitutes a nexus in which the two syllables meet.

These nexuses joining static syllables with preceding syllables are, in English, normally consonants (stridents or sonorants), but in abnormal utterances, and in certain types of normal utteraces, in English and in other languages, they may be resonants. Furthermore, in certain Swiss dialects, a long strest syllable may be followd by a static syllable, the two syllables joining in an intervening voiced resonant (vowel), or voiceless resonant, common to both syllables.

Every dynamic syllable, on the other hand, must always have a definit starting-point, located either (1) at the beginning of the word or utterance, as, in the word *better* ('betəɜ), at the beginning of the [b]; (2) between two medial sounds of different quality, as, in the word *baker* ('bee-kəɜ), at the beginning of the [k], and, in the word *coolie* ('kou-ɫi), at the beginning of the [ɫ]; or (3) within the limits of some medial sound which, were there no new breth-impulse, would be a

single sound, as, in the word *rat-trap* (ˈzæt,tɹæp), at the beginning of the second [t], and, in the word *coolly* (ˈkoul-lɪ), at the beginning of the second [l]. When a (second) new dynamic syllable or breth-impulse thus begins within a sound, the sound is cald double or geminated, and is, thruout this dictionary, represented (as here) by two separate letters.

When, as is always the case at the inception of a static syllable, the intersyllabic trough lies within the limits of a single sound (of minimum sonority), as, in the word *better* (ˈbetəɹ), within the [t], the letter representing this sound of minimum sonority sufficiently indicates the position of the intersyllabic trough. It is neither necessary nor beneficial further to indicate its position, for unless in uttering the word a new breth-impulse is gratuitously introduced, or some error made in the sounds themselvs, the correct pronunciation will necessarily result.

When, on the other hand, as is always the case at the inception of a dynamic syllable, the intersyllabic trough lies just before a certain sound, as before the [b] in *better* or before the [b] or the [k] in *baker,* it is often most necessary and beneficial to indicate its position.

Stress, or dynamic accent, is the relativ emfasis with which a sound, syllable, or sequence of syllables is utterd. It is the intensity or degree of energy characterizing a breth-impulse used in speech. It is the force or vigor imparted to any given utterance by the breth.

In the body of this dictionary, accordingly, the starting-point of every syllable having chief stress (that is, having the primary degree of force of a new or reinforced breth-impulse) is always indicated by means of a special symbol, the chief stress-mark (ˈ), placed just before the strest syllable; and the starting-point of every syllable having subordinate stress (that is, having the secondary, tertiary, or quarternary degree of force of a new or reinforced breth-impulse) is always (except initially, where it is left unmarkt) indicated by means of a general symbol, the hyfen (-), placed just before the strest syllable.

In this Preface, however, a special symbol for secondary stress, the secondary stress-mark (,), has also been used (medially insted of the hyfen, and also initially), whenever the syllable actually has secondary stress. This secondary stress-mark (,) will probably be used thruout the dictionary if a second edition is publisht. It is alredy employd thruout my Dictionary of Aviation which is about to appear.

In normal English any syllable immediately following a syllable containing a long strest vowel, a rising diftheng or trifftheng, or a syllabic consonant or a vowel, is a dynamic syllable; and any weakly strest syllable immediately following a syllable containing a short strest vowel plus one or more consonants is only a static syllable. Dynamic syllables are often found, however, in compounds, adopted words, as *bivouac* ('biv,wæk), etc., even after syllables containing short strest vowels. A given disyllabic word or combination, as *ego* ('ɛgɔ, 'ɛ,gɔ, etc.) may consist either (1) of a dynamic plus a static syllable, or (2) of two dynamic syllables. Whether or not a new breth-impulse occurs in a given combination of sounds depends on various factors: (1) the character of the consonants intervening between the syllabic crests; (2) their number; (3) the independence of the word; (4) its freedom from the influence of related more familiar words; and (5) the commonness of the word itself.

Until recent years, the nature of syllabication was not clearly understood. Some division of a word was, however, often necessary in writing and printing and some oral division was desirable in dictating. So the thing took shape in spelling-books and dictionaries. But the distinction between grafic word-division and fonetic syllabication only gradually became clear in the minds of men. Up to the present hour, altho the distinction between dynamic and static syllables has now for some years been quite well understood, and altho it is of the greatest importance in correctly indicating pronunciation, no dictionary has ever introduced it into its vocabulary. One reason for this may lie in the customary but fonetically vicious practis of placing the stress-mark at the end (or sup-

posed end), rather than at the beginning, of syllables. This practis has nothing but custom to recommend it. The stress-mark is commonly used thus by dictionary-makers and others, and this usage is often defended by misguided or unthinking persons, in apparent disregard or ignorance of the good to be derived from the use of a more scientific method. In reading, it is more convenient to have the stress-mark placed before, rather than after, the strest syllable, for, altho the reader doutless sees words and syllables for the most part as wholes, his eye nevertheless usually approaches them from the left, rather than from the right, and it is better that he should be apprised of the facts as to where a syllable begins, and how it is strest, during the incipient, rather than during the final stage of his visual or vocal action upon it. One prefers to see a guidepost before he gets to his destination or has past it.

Furthermore, in myriads of cases, it is impossible correctly to place a stress-mark after a strest syllable; for, whenever a a dynamic syllable is followd by a static syllable, the dynamic syllable, ending as it does within the limits of some (relativly unsonorous) sound within which also the static syllable begins, cannot accurately be represented as ending after that sound. For example, the word *sister* is pronounced neither ˈsɪ-stəɚ, nor ˈsɪs-təɚ, nor ˈsɪst-əɚ, but ˈsɪstəɚ. The boundary between its two syllables lies neither before nor after the [s], nor after the [t], but within the [t]. The first (dynamic) syllable merges into the second (static) syllable thru the sound of minimum sonority [t], which is common to both syllables.

The use of stress-marks in posterior position, just alluded to, confounds the whole subject of grafic word-divisions of current or fonetic orthografy (to be used at the ends of lines by writers and printers) with the quite different subject of real fonetic syllabication. This, together with the common practis of trying to show current spelling and etymology as well as pronunciation, all in one respelling of a word, results in the multitudinous fonetic errors with which the ordinary dictionaries and text-books are packt from cover to

cover. The merest tyro in fonetics, every child, indeed, who uses these books, is apt to be clearly or dimly conscious of many of these errors and systematic perversions of pronunciation. The troubles caused by the practis of using the stress-mark after the strest syllable cannot be overcome by placing the stress-mark above or below the vowel or consonant of maximum sonority which forms the crest of the strest syllable; for such a procedure not only multiplies enormously the number and complication of the symbols and types required, but fails to indicate either the beginning or end of the strest syllable.

In this dictionary, the stress indicated is, in general, the stress which the word has when isolated. Certain systematic shiftings of stress are indicated, notably in the case of words whose stress shifts according as these words are used posteriorly or anteriorly in a sentence, the posterior form being given first. (See page 3 of this Preface, under *Pronunciation.*)

Word-division. In dividing words at the ends of lines, we have (1) the case of current spellings, and (2) the case of fonetic spellings. In this dictionary the current spellings have been divided in an ordinary conventional manner which requires no special description. The fonetic spellings have been divided, wherever practicable, at the beginning of a dynamic syllable, that is, where there would alredy be a hyfen or a stress-mark in any event. Where it has been necessary or convenient to divide a fonetic spelling arbitrarily, where no new breth-impulse really begins, it is divided in a manner similar to the manner in which it would be divided were there really a new breth-impulse introduced (that is, were a new dynamic syllable begun there). For example, if the fonetic spelling ['pæzənt] of the word *parent* is divided at the end of a line, it is divided ['pæ-zənt] in the same manner as the fonetic spelling ['pɛ:-zənt], a variant of the same word, would be divided: that is, just before the letter (z), the hyfen being used as the mark of division at the end of the line. This use of the hyfen, now for real syllabic division, now

for mere arbitrary word-division, and again for joining the elements of compound words, renders it often an ambiguous symbol. (See page 29 of this Preface, under *Clarified Spelling.*)

Spelling Reform. The reformation of spelling presents itself under three modes: simplified spelling, clarified spelling, and fonetic spelling. Simplified spelling and clarified spelling are alike in being but amendments of the current orthografy, while fonetic spelling is a relativly independent system of orthografy based upon pronunciation. All three of these modes of reformd spelling are used to a certain extent in this dictionary.

Simplified Spelling. The current spelling may be simplified to some extent by omission of silent letters, by the amendment of certain glaring irregularities, and so on. This is the method used by the Simplified Spelling Board (1 Madison Avenue, New York) and the Simplified Spelling Society (44 Great Russell Street, London, W. C., England).

These organizations have, up to the present time, devoted their energies not to fonetic spelling but only to minor simplifications of certain words and classes of words. While using arguments based mainly upon the advantages of fonetic spelling, they have practically ignored the work, as they certainly

are neglectıng to employ the methods, of those who have alredy successfully constructed and ıntroduced the most perfect fonetıc alfabets and forms of fonetıc spellıng as yet devised.

While sımplıfied spellıng has a certain value, dırectly ın rectıfyıng certain minor defects ın the current orthografy, and ındırectly ın callıng attention to the advantages of fonetıc spellıng, ıt ıs entirely ınadequate to the task of brıngıng ınto exıstence (ın no matter how long a time) the fonetıc spellıng upon whose virtues are based the common run of arguments for sımplıfied spellıng.

Regardıng the ındırect value of sımplıfied spellıng, ıt may, however, be argued that ıt ıs perhaps more than offset by the ımplied mısdırection of energy and the dıvertıng of publıc attention from the main ıssue. Herbert Spencer, for example, held the opınion that sımplıfied spellıng retards the progress of fonetıc spellıng, ınsted of acceleratıng ıts progress as ıt purports to do.

To try to sımplıfy, clarıfy, or fonetize any radıcally bad system of spellıng, such as the Englısh, ın any ınterestıng or useful degree, and ın any reasonable period of time, wıthout usıng some thorogoıng, popular fonetıc alfabet, ıs vain. It ıs like tryıng to cifer wıthout fıgures, prınt wıthout types, or typewrite wıthout keys.

While real ınternational fonetıc spellıng of Englısh, French, German, and other languages ıs thus alredy an accomplısht fact, and hundreds of thousands of copies of text-books and dıctionaries containıng ıt are ın actual use ın the leadıng schools and unıversıties thruout the world (ıncludıng the United States), the Sımplıfied Spellıng Board labors under the ımpression that the publıc, tho now bezng operated upon by the Board, ıs as yet mentally too weak, fonetıcally speakıng, to bear any offıcial mention of fonetıc spellıng bezng made by the surgeon. To many persons ıt would seem to be the operator, rather than the patient, who ıs ın need of treatment for fonofobia.

The fallacy of the sımplıfied spellers lies ın their assumption that the only method, or at least the best method, for

mesure independently, both of its applications or products, and of its competitors.

Handwriting was not in itself developt into print or into typewriting. The important thing was the conception and development of an entirely separate instrumentality, the printing-press or the typewriter, by which to create the printed page or the typewritten sheet. Printing-presses and typewriters were simply invented outright and placed on the market in open competition with pen and ink, instruments for producing similar products. Demonstrations were given of their relativ value for this specific purpose, and, with direct profit as prime mover, the new inventions and the new products won their way.

And so it is apt to be, too, with systems of orthografy. A good useful orthografy may be considerd to be a product, for the making of which an invention was required. This required invention was a good fonetic alfabet. Half a century ago Isaac Pitman invented a fonografic alfabet and a system of fonetic shorthand. The alfabet was demonstrated to be of greater value than the ordinary alfabet for certain specific purposes, and this invention (the fonografic alfabet) and its product (the system of shorthand writing) came into common use for reportorial purposes.

A quarter of a century ago Paul Passy invented a universal fonetic alfabet and a universal system of fonotypy and fonetic handwriting. This alfabet has been demonstrated to be of greater value than any of the alfabets of the world for general purposes, and this invention (the universal alfabet) and its products (the new systems of orthografy for all languages) have been widely adopted.

Simplified spellings are used in the definitions of this dictionary largely on their merits as media thru which to help the reader easily to grasp the pronunciation of the words. Where their use would, on account of the conciseness of the definitions, or on any other account, fail of this object and render the text more obscure, their use has often been avoided.

In the vocabulary of this book are given all the main words (except some in *-ive*) and many of the derivatives, of which more simple forms are advocated by the Simplified Spelling Board. The rules of the Board are also applied to some words which do not happen to be included in the list publisht by the Board, as *Alexandrin, carlin, carmin, deprivativ, desiccativ, partil, passerin*, etc.

I insert the simpler forms among the variant spellings in this dictionary not solely because they are advocated by the Board and others, but because many of them either have long existed or do now exist to a considerable extent in current use in literature; and also because almost all of them are either in accord with what I consider to be a scientifically practicable system of standardized fonetic orthografy, such as is used in the re-spellings given in this book to indicate pronunciations and is, in my opinion, destind eventually to supersede the current English cacografy.

The following are the rules governing the simplifications containd in the list of about 3300 words publisht by the Simplified Spelling Board on March 6, 1909 (Circular No. 23). Aside from a few slight changes in the wording, some minor adjustments necessitated by a more accurate marking of the pronunciations, etc., and one additional example under Rules 17 and 18, the rules and examples are given exactly as publisht by the Board.

To facilitate acceptance it was deemd expedient by the Board in some cases to restrict the rule to a limited number of the words in a given class. In these cases the expression 'Restricted Rule' has been used. Any one who chooses to extend the rule at once to all the words of a given class is of course free to do so. After each rule is given a list, either of all the words affected (if they are not many), or of a few examples of the large number of words coverd by the rule. In the latter case 'Examples' is prefixt, and 'etc.' is added. If the Board's official recommendation applies to all words containing the letter, sequence of letters, or suffix, affected, in the pronunciation indicated, the expression 'General Rule'

is used. For some small classes and for isolated amendments no rule is given.

RULES OF SIMPLIFIED SPELLING

1. **ae, æ** or **e,** not final. General Rule: Choose **e.** Examples: *anesthetic, chimera, era, esthetic, ether, medieval, paleontology,* etc.

2. **-bt,** with **b** silent. General Rule: Omit **b.** *det, dettor, dout, indetted, redout, redouted, redoutable.*

3. **ea,** pronounced [ɛ]. General Rule: Drop **a.** Examples: *hed, spred, sted, tred, thret, helth, welth, dremt, ment, plesant,* etc.

4. **ea,** pronounced [ɑ], before **r.** General Rule: Drop **e.** *harken, hart, harth.*

5. **-ed** or **'d,** pronounced [d]. General Rule: Use simple **d** in all cases (reducing a double consonant). Examples: *aimd, armd, burnd, deemd, dimd, feld, fild, hangd, raind, stird, veild,* etc.

6. **-ed** or **-t,** pronounced [t], the preceding single consonant being doubled before **-ed** (-pped, -ssed) and left single before **-t** (-pt, -st). General Rule: Choose **-t** in all cases. Examples: *dipt, dript, dropt, stept, stopt, blest, prest, mist, blusht, washt, wisht, lockt, packt,* etc.

7. **-ence** or **-ense** (Latin *-ensa*). Restricted Rule: Choose **-ense.** *defense, offense, pretense*; also *license* (Latin *-entia*).

8. **-ette** or **-et.** General Rule: Choose **-et.** Examples: *coquet, epaulet, etiquet, omelet, quartet, quintet, septet, sextet,* etc.

9. **gh** or **f,** pronounced [f]. Restricted Rule: Choose **f.** *draft,* not *draught.*

Clarified Spelling. The current spelling may be clarified or made considerably clearer by the substitution of certain letters of definit fonetic value for the ordinary letters closely resembling them or associated with them in the popular mind, wherever these ordinary letters, in the particular context in which they occur, have the exact value of the fonetic letters. This mode of spelling reform has been in vogue for thousands of years. It has recently been used in English in the works of Dr. Francis A. March and others, but in a crude and inaccurate manner and to a very limited extent. It has been used in Italian with considerable accuracy thruout the dictionaries and grammars of P. Petrocchi.

In English *(g) may thus be substituted for (g), (gh) for (gh); (ʃ) for (s), (ʃh) for (sh); (ʒ) for (z); (z) for (s); *(w) for (w), (wh) for (wh); (ŋ) for (n); (ɴ) for (n); (ᴍ) for (m); (ɫ), (ʟ) for (l); (ɾ), (ʒ), (z), (s) for (r); *(u) for (u); *(ɪ), (ɪ), for (i); (ə), *(ɛ) for (e); (ɔ), (c), *(ɵ) for (o); (au), (aʊ) for (ou), (aw) for (ow); (æ), *(ɑ), *(ɑ), (ə) for (a), etc.

In the present volume only the letters here markt with a star (*) have been used in this way. Further clarification or at least simplification, has been effected, thruout this book, by always using (ff) for (ff), (ffi) for (ffi), (fi) for (fi), (ffl) for (ffl), (fl) for (fl), (oe) for (œ), except in certain words adopted from French, and (ae) for (æ).

To this extent clarified spelling has also been used thruout this Preface, except in the table of the English gammakap and in certain other places where the exact current spellings of certain words have to be given for illustrativ purposes. Clarified spelling is thus used not only because of its intrin-

value. It is capable of producing considerable results for everybody. Any given individual is apt to find it of great value, both direct and indirect, to himself and to others.

Clarification, as here described, consists of a scientifically simple set of universal rules applicable not only to English but to a multitude of other languages and dialects. Simplified spelling, on the other hand, as usually carried on, consists of a complicated congeries of special rules applicable to one language only. In so far as it operates merely by omitting useless letters, or choosing the lesser of two or more cacografic evils, it is negativ in method. It often changes the general form of words. On this account, and because the simplified forms are but rarely encounterd, and then only in conventional surroundings, they are apt to be conspicuous, and the reader is often subjected to hindrances, distractions, and shocks. It almost always leaves the few words which it affects at all in an inexact, pseudo-orthografic condition. It therefore teaches little or nothing. This fact is clear to many filologists. Something of the sort is also dimly felt to be true by the public. Simplified spelling seems relativly superficial, and hardly capable of producing great results for anybody. No given individual is apt to consider it of any immediate value, on the whole, to himself or to others.

Phonetic Spelling. The current spelling may, as implied in the above paragrafs, be replaced by one or more systems of fonetic spelling, each system being adapted to certain specific purposes. As remarkt, fonetic shorthand or fonografy has alredy replaced or supplemented the current spelling for reportorial and other purposes. Various systems of roman-letter fonetic spelling have alredy supplemented the current spelling in the respellings given in dictionaries.

The fonetic alfabets of the recent past have certainly been makeshift affairs. They are usually devised for temporary or special purposes, for use in one particular book, or in only one language. The men who devise alfabets often seem to take a smug satisfaction in doing nothing more than what is absolutely necessary. Alfabets such as those of Webster,

Lepsius, Ellis, Pitman, Bell, and March are manifestly defectiv, clumsy, and incapable of development, and thus inadequate for general use.

The amplified form of the roman alfabet used in the respellings of the title-words thruout this dictionary has been undergoing a most remarkable development during the last quarter of a century. It is by far the most diversely used and highly perfected means as yet developt for indicating, simply and accurately, the pronunciation of all languages in any popular world-wide system. It will doutless undergo further modification of detail as time goes on, but the principles which have guided the selection of its letters from the alfabets of the world, its flexibility, and the extent and manner of its present use, bespeak its capacity for development and foretell its universality. It has alredy been applied to several hundred languages and dialects and is now in activ competition with local and old-fashiond systems of fonetic spelling, not only in dictionaries and grammars, and textbooks on fonetics, but also in general literature.

Behind the scenes of every-day life, in the laboratories of filologists, the vocabularies and literatures of the languages are being costumed anew. Thus freshly appareld in true cosmofonic style, they are issuing forth upon the world arena. The triple curtain of conservatism, ignorance, and patriotism, which hides them, is lifting. "Thru the perspectiv of clear wits they are looming both great and near." Their unmatcht power to reecho articulate speech, and thus to facilitate the communication of emotions and ideas, is becoming more and more apparent to the multitudes who are alredy using them. In due time, I fancy, their votaries will include all the peoples on the globe.
